

Native Children Always Ride Safe

**Build a
Strong
Tradition**

Tough guys use booster seats.

The 5-Step Test

- Does the child sit all the way back against the auto seat?
- Do the child's knees bend comfortably at the edge of the auto seat?
- Does the belt cross the shoulder between the neck and arm?
- Is the lap belt as low as possible, touching the thighs?
- Can the child stay seated like this for the whole trip?

Boosters are best for children under 4'9"

There is no rush to move children to a seatbelt alone. All children whose weight or height is above the limit for their CSS should use a belt-positioning booster seat until the vehicle lap and shoulder seat belt fits properly, typically when they have reached 4 feet 9 inches tall and are between 8 and 12 years old
